

Industry: **Food Processing**

About

As one of the largest foods companies in the world, the company currently employs over 280,000 workers and operates internationally in 86 different countries. As the most powerful company in the food industry, the company owns over 6,000 food brands, many of which are household names.

Their Scenario

Their office complex consists of 2 different buildings and both are connected to a VPN (virtual private network) server. In total, the complex has about 40 printers and spends more than \$18,000 each year on printing.

The main printing problems of the company are:

1. Print waste: Printing unnecessary copies and personal material results in a waste of print resources
2. Information security problems: the company must take security precautions in order to protect important technical documents regarding future products. If these confidential documents leak, competitors will obtain additional knowledge about the developmental plans of the company.

Solution

PrintUsage Pro records all of the details of each print job, including the user name, file size, paper size, use of color, and the number of pages. The administrator can view statistical reports in order to charge each department for the correct number of pages printed. Additionally, the administrator can freely define the scope and extent of monitoring according to the needs of the company. PrintUsage Pro's auditing features allow the administrator choose what type of documents must be manually audited. By marking certain documents as confidential, the administrator can manually audit the print jobs of confidential documents, preventing these documents from leaking.

Results

1. After one year, PrintUsage Pro reduced printing expenses by \$7,000 (about 40%)!
2. Employees in a department cannot print documents without the permission of the departmental manager. PrintUsage Pro ensures information security by closely monitoring the company's print jobs.

Feedback

As a top-tier company in the food industry, the company places great importance on information security and management. The company commented that it seemed like PrintUsage Pro was customized for the company.

“Thanks to the print monitoring features of PrintUsage Pro Enterprise, we centralized our print management and we were able to effectively manage important data regarding our food products. PrintUsage Pro also reduced our printing expenses and effectively controlled costs for our business. We fully recommend PrintUsage Pro.”
